

TASK 06 AI STREET INTERVIEW

STEPS TAKEN:

1) Firstly, I was trying to find free AI text-to- video generator websites. I tried 3 or 4 websites but all of them required paid subscriptions, so I got frustrated. So, I even tried an audio generator called SpeechMa. But it did not give any good result.

2) I also tried Chat GPT's video generation platform but it does not generate audio.

3) Then I tried Google Veo 3 but apparently, it is also not free to use.

4) Then after researching on Youtube, I tried a custom GPT called Invideo AI. My first prompt was

"Generate a short street interview between a monkey and a kangaroo, where the monkey is the interviewer and the kangaroo is the interviewee. the monkey asks the kangaroo "what do you call a lazy baby kangaroo?" Then the kangaroo says "I dont know". Then the monkey says "A couch potato" and laughs."

5) The GPT gave me a text script of the video and some additional dialogues I could add but it did not generate a video. So, I just told it to generate a video for this exact script but it said that it cannot and gave me a link to another paid AI video generator .

6) So, I went back to the search page for the custom GPT's and searched for text-to-video generator and clicked on the first result for it.

7) I gave it the same prompt as before and it gave me two options for it. They were as follows:

Got it 🐒 🎤 🦘 That's a funny, punchy little gag — perfect for a 20–30 second short.

Here are **two narrative concepts** you could run with:

Concept A: Street Vibes Short

- **Style:** Fast-paced street interview parody (like vox-pop comedy clips).
 - **Runtime:** ~20 seconds.
 - **Flow:**
 - Monkey holds a tiny mic, asking confidently.
 - Kangaroo looks puzzled, ears twitching.
 - Monkey delivers punchline → bursts into laughter → quick zoom for comedic emphasis.
 - **Hook:** “What happens when a monkey interviews a kangaroo?”
-

Concept B: Cartoon Skit

- **Style:** Animated short with exaggerated expressions.
- **Runtime:** ~30 seconds.
- **Flow:**
 - Monkey does over-the-top “reporter voice.”
 - Kangaroo shrugs cluelessly.
 - Monkey cracks the joke → both pause → kangaroo facepalms.
- **Hook:** “Breaking news: kangaroos exposed as couch potatoes!”

8) So, I said generate a video for this . Then it gave me a link to Invideo AI website again. But this time I could use it for free. It gave me style and format options for the video. After 4-5 minutes it generated a 12 second clip. It could have been a lot better but it was not bad. The kangaroo's lips did not move while talking. So, tried to edit it but that required 3 more credits which I did not have. So, I had to stop.
